CASE STUDY
XYNTA INTERNET SOLUTIONS

Local Cloud » SaaS Managed Email Security on your own premises » Incoming & Outgoing Filters » 4-tier Control » API » Clusterable » Synchronized » Scalable

SpamExperts in-house developed security filters offer an accuracy rate of 99.98%. The Incoming and Outgoing Filters are tailor made to suit the needs of Webhosts, ISPs/Telcos and large organizations, as well as Resellers and Distributors. Having full Inbox protection at network level will help companies save significant resources and keep end-users happy and in full control through the user-friendly SpamPanel administration interface.

Quick Read

xYnta Internet Solutions is a company based in the Netherlands, which provides high quality hosting services such as domain names, webhosting packages, virtual and dedicated servers with a strong emphasis on service.

Challenges

xYnta Internet Solutions hosts several different websites, 70% of them being based on popular content management systems such as WordPress, Joomla and Drupal. Most of these are poorly maintained by their owners, which leads to hacked websites that occasionally send large quantities of spam messages. As a result, blacklisting was the biggest problem xYnta had to face on a daily basis. After using a variety of local spam filter solutions provided by different control panels, they were still unable to prevent such situations so the team started looking for a professional email security solution.

Customer profile

Company	xYnta Internet Solutions
Location	Zwijndrecht, Netherlands
Industry	ISP
Number of filtered domains	5,000 domains Incoming 5,000 domains Outgoing
Products in Use	Local Cloud, Incoming & Outgoing Filters
Website	https://www.xynta.com/

Implementation

xYnta became a SpamExperts client in 2015. Currently, SpamExperts solutions help protect both their business, as well as their clients. The team went for the incoming and outbound spam protection in the Local Cloud for a number of 5,000 domains. Although xYnta initially chose the Hosted Cloud implementation, they ultimately switched to Local Cloud. Their plan is to protect as many clients as possible and to reduce the number of spam messages sent from their servers and network. Over the next couple of months, they hope to increase the number of clients using SpamExperts solutions.

Benefits

After implementing the Incoming and Outgoing Filtering solutions in the Local Cloud, xYnta clients noticed a decrease of spam and of mail delivery problems. At the moment, they are exploring the possibility of implementing SpamExperts solutions for more customers.

"We've previously protected a number of clients by using the Hosted Cloud solution provided by SpamExperts. In the course of a few months, we received several positive reactions from clients who have been actively using these services. This led us to explore a much larger implementation of SpamExperts throughout our services, which eventually led to purchasing a Local Cloud package for two individual servers with a starting number of 5000 domains," explained Axel Polfliet, xYnta Internet Solutions Owner.

Target Reached

"SpamExperts offers us the chance to further improve our products and services and increase overall customer satisfaction. We've seen a decline of 95% in incoming and outgoing spam and malware messages, with clients who are already actively using this service. Questions were answered quickly, delivery of the ordered product was prompt and implementation was without any problems at all. The provided service works like we've expected it to work and our customers use the spam panel daily to check out their e-mail traffic and look up block spam and malware messages," said Axel Polfliet, xYnta Internet Solutions Owner.
