EMAIL SECURITY IN THE CLOUD OR ON-PREMISES
INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security on your own premises » Incoming & Outgoing Filter, Email Archiving » 4-tier Control » API » Clusterable » Synchronized » Scalable

Over the past years, global concern over cyber security has grown, as spammers and phishers have been taking advantage of the software and security shortcomings to hack computers and steal valuable information to ultimately commit fraud. There are 204 million emails sent in one internet minute! And still roughly 70% is spam.

That is why it is crucial that webhosting providers provide incoming and outgoing spam and virus protection to their clients. SpamExperts offers the most advanced spam filtering and classification system on the market for webhosts. Moreover, SpamExperts systems are efficiently developed and set-up to allow for easy support thereof.

Quick Read

GeekStorage.com, LLC is a provider of website hosting, VPS, dedicated servers, and website development for small to medium-sized businesses. Founded in 2007, Geek Storage now provides hosting for clients out of three U.S. data center locations and one location in Europe. Contact Geek Storage at 1-888-865-6515 or visit www.geekstorage.com for more information.

Challenges

Before Geek Storage began working with SpamExperts, it was using an open source solution to deal with spam related issues on its servers. In the last 7 years, Geek Storage quickly grew into a full service webhosting, VPS and related services provider. In parallel, spammers became more sophisticated, making it harder and harder to beat them at their game without a professional filtering software in place.

The fast-paced growth and the increased amount of administrative time wasted in dealing with spam related issues brought the need for a more robust spam filtering solution.

Customer profile

Company	Geek Storage
Location	Norman, USA
Industry	Webhosting
Number of filtered domains	5.000
Products in Use	Local Cloud, Incoming and Outgoing Filter, Email Archiving
Website	http://www.geekstorage.com

Implementation

Geek Storage team found themselves struggling with spam problems that challenged their productivity and efficiency. Revisiting their search for a spam filtering tool, Geek Storage sought to find a system that addressed their most dire needs, including shortcomings with spam filtering accuracy, email continuity and easy maintenance. Geek Storage selected the SpamExperts Local Cloud solution, as they wanted to maintain control over both the physical and network infrastructure of their email filtering servers. The software has been installed and is managed by SpamExperts, while Geek Storage receives 24/7 real-time monitoring, updates and support. Geek Storage clients have access to the Spam Filter through their web hosting control panel, where they administer their domains.

Benefits

One of the most challenging tasks for any webhosting company is to protect the customers' inboxes from spam and their IPs from being hacked and blacklisted. Geek Storage has deployed all three services for a complete protection of its network: incoming email filtering (for incoming spam and virus protection), outgoing filtering (for IP reputation and email continuity) and email archiving (for back-up and compliance purposes).

One month after the deployment, SpamExperts has already brought a lot of solutions to the growing spam problems. The team spends less administrative time dealing with spam-related issues and the company now has a professional spam filtering product which customers can enjoy with their existing service. "We are excited to have partnered with a company who has a stellar reputation in the anti-spam industry and who can help us alleviate this administrative burden while simultaneously providing our users enterprise level spam filtering.", testifies Matthew Eli, Managing Member of Geek Storage.

Furthermore, Geek Storage credits SpamExperts support team with offering quick responses and exceptional support.

Target Reached

"We have seen the amount of spam significantly rise over the years. Spammers have become better at avoiding detection and an enterprise solution is needed to help combat this growing problem. We have found the solution: SpamExperts. Stop spending too much time and money trying to combat the spam problem with inadequate solutions and, instead, turn to the professionals at SpamExperts. We highly recommend them.", concludes Matthew Eli, Managing Member of Geek Storage.
