EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security on your own premises
» Incoming & Outgoing Filtering » 5-tier Control » API » Clusterable »
Synchronized » Scalable

Spam has been a problem for email users worldwide. It consumes resources, reduces productivity in business, one email and one tricked user being enough to expose an organization to a noxious malware infection. This is why it has become mandatory for web hosting providers to include professional spam filtering into their package, in order to provide a fully secured email platform to their end clients.

Quick Read

EZZI.net is a Managed & Hosting Services Provider, in business since 1995 and specialized in providing reliable and affordable hosting services. Over the years, the company has built a strong reputation based on offering great service and “value for money”, a fact that has helped EZZI.net become the # 1 choice for companies and resellers seeking great hosting services at affordable prices.

Challenges

Spam was a big challenge for EZZI.net and for its customers. Although the team used hardware based anti-spam, the attacks and their efforts to block them still consumed many server resources and reduced productivity. This became a serious problem when customers started spending a lot of time cleaning up their inboxes. To assist the needs of their clients, EZZI.net began searching for cost effective anti-spam software, which would accurately filter emails and keep inboxes free of spam and viruses, while also aiming at low latency with negligible delay in email filtering. When contacted by a SpamExperts representative, they understood the importance of implementing a professional solution.

Customer profile

Company	EZZI.net
Location	Texas, USA
Industry	Web hosting
Number of filtered domains	250 domains Incoming 5,000 domains Outgoing
Products in Use	Local Cloud, Incoming & Outgoing Filtering
Website	www.ezzi.net

Implementation

EZZI.net implemented Inbound and Outbound Filtering from SpamExperts in the Local Cloud in 2013. The Local Cloud is fully clusterable, allowing one central management control server and adding more filtering servers as the number of filtered domains increases. While the Incoming Filter keeps their Inboxes clean, the outgoing filter helps control IP reputation. The web host currently uses the product to filter all email for their clients. As the filter is fully managed by SpamExperts, it is easier to troubleshoot, with EZZI.net receiving 24/7 real-time updates and monitoring.

Benefits

The spam solution was successfully implemented for EZZI.net. The SpamExperts Local Cloud for web hosts was a great choice for their company, as it offers scalability and attractive domain-based pricing. Since deployment, spam has been out of the picture. As everything is fully managed by the SpamExperts tech team, the web host and its customers don't waste time with manually adjusting the filters. The team is very pleased with the filtering accuracy and the straightforward administration.

Target Reached

"EZZI.net has implemented the SpamExperts solution for inbound, as well as outbound mail filtering. The outbound filtering is particularly useful in helping us keep our IP space clean and the filter is overall able to handle volume well. It is extremely easy to set up a new customer and support tickets are handled relatively quickly," explained Ali Dhoon, EZZI.net CEO.
