EMAIL SECURITY IN THE CLOUD OR ON-PREMISES

INCOMING » OUTGOING » ARCHIVING

Local Cloud » SaaS Managed Email Security » Incoming Filter »
Outgoing Filter » Email Archiving » API » Clusterable » Synchronized
» Scalable

Email security is an essential element of cybersecurity. Without a professional solution to stop unwanted email flooding inboxes, a business could very well lose its competitive edge and can leave itself open to cyber threats.

A company that provides industry-proficient protection against unsolicited email that may contain viruses, malware, phishing attempts, and other such hazards will always be a step ahead of its competitors. Effective email security saves valuable resources and lets the company focus on more crucial day-to-day functions.

Quick Read

SoHosted has been providing exceptional web hosting, virtual web hosting, and domain registration services for more than 10 years. The Dutch-based web host relentlessly explores new ways to improve the quality of services they provide while maintaining a superior customer satisfaction rate. With a motivated and highly talented team of professionals, SoHosted aims to deliver high quality service on a daily basis.

Challenges

SoHosted's main issue with spam was that it impacted their customer satisfaction, leading to complaints about unsolicited messages and time spent on deleting spam. The web host first tackled the issue by utilizing the open-source SpamAssassin platform and an in-house developed solution. The fix proved to be inefficient and rapidly lost traction, as it wasn't capable of adapting with the ever-evolving spam trends.

Implementation

After meeting at WHD.global, the Dutch company sought SpamExperts upon recommendation. Testing filtering services led to the company acquiring a year-long subscription and opting for the Hosted Cloud deployment, which offers a private fully managed filtering cluster with cloud redundancy spread over different continents and data centers.

Benefits

As soon as the Incoming Filtering product was deployed, customers' spam started to dwindle. Via the Hosted Cloud, SpamExperts created a filtering wall in front of SoHosted's existing infrastructure. The Incoming Email Filter protects user emails from spam and malware and keeps customers happy.

Target Reached

"Since we started using SpamExperts, the complaints about spam messages has lowered significantly. Another great benefit was the reduced amount of storage needed for emails, because, in the end, far fewer messages passed through to our mail servers," says Jan Bouma, Sysadmin at SoHosted.
