CASE STUDY
:YULPA

Local Cloud » SaaS Managed Email Security in the cloud » Incoming Filter » Outgoing Filter » Email Archiving » API » Clusterable » Synchronized » Scalable

Email continues to be one of the most exploited entry-vectors for spammers and hackers with sophisticated phishing, ransomware, malware and virus campaigns, targeting users & companies from across the world. Business disruption due to email security compromise can cause significant costs, but more importantly, brand reputation is at stake. With SpamExperts, companies can employ cohesive and scalable email security solutions to protect against the most advanced email threats that plague the internet. As well, organizations can also become compliant-ready with the use of the reliable and easy to use SpamExperts Email Archiving software.

Quick Read

:yulPa is a company based in France, Paris, that provides services in the data hosting industry. Since 2006, they are a public/private provider of web hosting, email, infrastructure, virtual private servers and cloud services.

For more information, please visit the official website at www.yulpa.io.

Challenges

As a hosting provider, :yulPa had to deal with spam on a daily basis. Incoming spam was prevalent for the company and its customers, with a lot of phishing emails, including ransomware as well, winding up in inboxes. As well, outgoing spam was becoming a nuisance as removing IP addresses from SMTP blacklisting services was not only time consuming but was eating up a lot of company resources too. Understanding that these issues can't be avoided with the use of SpamAssassin, and professional software needs to be implemented, SpamExperts was brought into the mix.

Customer profile

Company	:yulPa
Location	France
Industry	Data Hosting
Number of filtered domains	10,000 domains Incoming 10,000 domains Outgoing
Products in Use	Incoming Filter, Outgoing Filter, Email Archiving
Website	www.yulpa.io

Implementation

The SpamExperts reps discussed the ins and outs of :yulPa's infrastructure to better understand what fits their network best. After everything was carefully analyzed, the SpamExperts Incoming Filter and Outgoing Filter products were deployed via the Local Cloud - a deployment option selected, primarily, by users who want to keep the data sets under their own control, locally in their very own infrastructure.

Benefits

With SpamExperts in charge of tackling these very serious issues, the French company witnessed a decrease in spam and blacklisting events - for the latter, to the point of becoming a non-issue.

"The SpamExperts team is very nice and we really appreciate their availability. We used the ticket support system and we are glad to say that the answers were quick and services were great," explains Benoit Georgelin, System and Infrastructure Security, :yulPa. "Having people on the phone, to talk about infrastructure and design was very useful. It's great to talk with people who understand their business and the needs of their clients."

Target Reached

"At :yulPa, we have been providing emails services (outgoing and incoming) for many years. Web hosting services are also very consuming in outgoing emails. SPAM emails have always been a problem, but in the past two years this became a real issue. Now, with SpamExperts we found a very good and cost friendly quality system and are able to provide email filtering for all our customers. We are proud to join the SpamExperts Hosting Partner Program and believe that the internet will be safer for our customers and a more complicated world for spammers," notes Benoit.
